SUBJECT: SCE PSPS Post Event Report – December 4 to December 14, 2020

Dear Director Palmer:

Southern California Edison (SCE) respectfully submits the attached report in compliance with the Public Safety Power Shutoff (PSPS) Post Event Reporting requirements regarding its PSPS event that began December 4 and ended December 14, 2020.

This report has been verified by an Officer of SCE in accordance with Rule 1.11 of the Commission's Rules of Practice and Procedure.

Sincerely,

DocuSigned by:

29E9CB7BDB43475...

**Southern California Edison
Public Safety Power Shutoff Protocol (PSPS)
Post-Event Reporting in Compliance with Resolution
ESRB-8 and PSPS OIR Phase 1 & 2 Requirements
December 4 to December 14, 2020**

**Submitted to:
California Public Utilities Commission
Director of the Safety and Enforcement Division
December 29, 2020**

Executive Summary

This report provides information related to the Public Safety Power Shutoff (PSPS) event that occurred in SCE's service territory from December 4 through December 14, 2020. On December 4, 2020, Southern California Edison (SCE) remotely activated¹ an Incident Management Team (IMT) to manage a weather event during which forecasted Santa Ana high winds and low relative humidity levels were anticipated to potentially require the use of SCE's PSPS protocol, which could impact as many as 197,729 customers. SCE customers in San Bernardino, Riverside, Orange, Kern, Los Angeles, Tuolumne, and Ventura counties were originally in scope with a period of concern initially identified as December 7 at 9:00 am through December 8 at 6:00 pm. During this event, SCE also de-energized circuits not originally in scope when unexpected high wind conditions and elevated FPI levels were observed in the areas of concern as detailed in this report. Ultimately, SCE pro-actively de-energized 73,137 customers in areas of Inyo, Kern, Mono, Los Angeles, Orange, Riverside, San Bernardino, and Ventura counties. Power was restored to all customers impacted by PSPS on December 11 by 11:45 am. This PSPS event continued through December 14, while dangerous fire conditions persisted, although no additional de-energizations were ultimately necessary on the remaining days of the event.

SCE submits this report to demonstrate its compliance with the directives of Resolution ESRB-8 and the California Public Utilities Commission (CPUC or Commission) PSPS Order to Institute Rulemaking (OIR) Phase 1 (Decision (D.) 19-05-042) and Phase 2 (D.20-05-051) requirements associated with PSPS events. This report explains SCE's decision to call, sustain, and conclude a de-energization event and provides both a summary of the event and the responses to the post-event questions as required by the Commission. SCE submits this report to the Director of Safety and Enforcement Division (SED) and the service list for Rulemaking R.18-12-005.

SCE appreciates that PSPS de-energizations pose significant challenges and hardships for its customers and the Public Safety Partners that provide vital services to our communities. SCE recognizes that this is particularly true when the unexpected onset of dangerous weather and fuel conditions requires that SCE take actions quickly and without all the advance notifications contemplated by the CPUC. SCE's decision to activate its PSPS protocol is based on careful consideration of multiple factors, including forecasted weather, fuel conditions, and impacts to Public Safety Partners and the communities we serve. Because SCE takes seriously its responsibilities and understands the impacts of de-energization events, SCE only uses PSPS de-energization when it believes that there are no other reasonable alternatives to mitigate identified risks to public safety that would result from catastrophic wildfire.

SCE remains committed to continuously improving its processes and welcomes input from its customers, public safety partners, community representatives, and local governments on ways we can work together to enhance the existing processes, improve communication and coordination amongst impacted entities, and minimize the impact of PSPS events on all stakeholders.

¹SCE utilized remote IMT activation due to the impacts of COVID-19.

SCE took the following actions to manage its response during the PSPS event:

1. Activated a Dedicated PSPS IMT to coordinate response operations associated with the potential use of PSPS to maintain public safety. The IMT was activated and operated remotely due to the COVID-19 pandemic.
2. Reached out to the Geographical Coordination Center (GACC)² to coordinate regarding its expectation for fire potential over the course of the PSPS event.
3. Provided notifications to Public Safety Partners, critical infrastructure providers, the CPUC, the California Department of Forestry and Fire Protection (CAL FIRE), the California Governor's Office of Emergency Services (Cal OES), and affected SCE customers. Additionally, SCE provided notices to Community-Based Organizations (CBOs), such as Independent Living Centers (ILCs), the American Red Cross, 2-1-1, and Fire Safety Councils.
4. Initiated operating restrictions on impacted circuits, as applicable.
5. Performed field patrols of impacted circuits where possible in preparation for the potential use of the PSPS protocol for de-energization.
6. Deployed Community Crew Vehicles (CCVs) to impacted communities.
7. Performed live field observations of monitored circuits as required during the period of concern to validate actual weather conditions and the need for the use of PSPS for de-energization.
8. Utilized the PSPS protocol to de-energize circuits within High Fire Risk Areas (HFRA) as determined necessary by the Incident Commander based on observed conditions utilizing weather stations and/or live field observations
9. Performed post patrols to verify no damage to de-energized circuits in support of safe restoration activities.

Event Summary December 4 to December 14, 2020³

December 4th -- SCE was in the process of finalizing the demobilization of the PSPS IMT for the PSPS event that began November 29, 2020, and ended December 4, 2020, when SCE meteorologists notified SCE's Business Resiliency Duty Manager (BRDM) of an additional incoming Santa Ana weather system that was again forecast to bring dangerous fire weather conditions for portions of the SCE territory beginning December 7 at 9:00 am through December 8 at 6:00 pm. SCE determined activation of the PSPS IMT would continue to be necessary on December 4 to manage this new event given the incoming weather system. As such, SCE concluded the November 29 event and began a new PSPS event in the afternoon of December 4.

SCE contacted the Southern California GACC, and alerted the CPUC, impacted counties and critical infrastructure about the new event during the scheduled November 29 State Executive call at 3:00 pm, the OEM County Coordination call at 3:30 pm, and the Critical Infrastructure call at 4:00 pm. SCE communicated the details of the concluded November 29 event and provided information on the incoming December 7 forecast, including potential customers in scope. SCE also answered any questions regarding the event during the calls. SCE sent notifications to public safety partners and

² The GACC is the physical location of an interagency, regional operation center for the effective coordination, mobilization, and demobilization of emergency management resources. A coordination center serves federal, state and local wildland fire agencies through logistical coordination of resources throughout the geographic area, and with other geographic areas, as well.

³ The following event summary serves to provide an overview of the event. Additional details regarding specific PSPS requirements are addressed in further detail after this narrative.

critical infrastructure providers at 9:06 pm and 8:32 pm with respect to the circuits projected to be in scope for a potential de-energization. SCE also dispatched pre-patrol resources to begin inspecting identified circuits in scope for the PSPS event.

December 5th -- SCE held its daily State Executive call at 2:00 pm, an OEM County Coordination call at 2:30 pm and a Critical Infrastructure call at 3:30 pm to communicate the weather forecast, customers in scope, and answer any questions regarding the event. SCE emailed participants after the daily calls to provide the briefing materials shared. SCE sent notifications to public safety partners at 2:23 pm and 7:55 pm and critical infrastructure providers and customers at 2:21 pm and 7:40 pm with respect to circuits projected to be in scope for the event. At that point, updated weather forecasts indicated circuits in Kern, San Bernardino, Los Angeles, Orange, Riverside, Tuolumne, and Ventura counties with approximately 114,817 customers potentially in scope for de-energization during the period of concern, which was revised to December 7 at 9:00 am through December 8 at 3:00 pm.

December 6th -- SCE held its daily State Executive call at 2:00 pm, an OEM County Coordination call at 2:30 pm and a Critical Infrastructure call at 3:30 pm to communicate the weather forecast, customers in scope and answer any questions regarding the event. SCE emailed participants after the daily calls to provide the briefing materials shared. SCE sent notifications to public safety partners at 11:13 am and 7:17 pm and critical infrastructure providers and customers at 11:31 pm and 7:05 pm with respect to circuits projected to be in scope for the event. At that point, updated weather forecasts indicated circuits in Kern, San Bernardino, Los Angeles, Orange, Riverside, Tuolumne, and Ventura counties with approximately 161,980 customers potentially in scope for de-energization during the period of concern, which was revised to December 7 at 6:00 am through December 8 at 3:00 pm.

December 7th -- SCE held its daily State Executive call at 2:00 pm, an OEM County Coordination call at 2:30 pm and a Critical Infrastructure call at 3:30 pm to communicate the weather forecast, customers in scope and answer any questions regarding the event. SCE emailed participants after the daily calls to provide the briefing materials shared. SCE sent notifications to public safety partners at 12:57 pm and critical infrastructure providers and customers at 3:10 pm and 9:02 pm with respect to circuits projected to be in scope for the event. At that point, updated weather forecasts indicated circuits in Kern, San Bernardino, Los Angeles, Orange, Riverside, Tulare, and Ventura counties with approximately 197,729 customers potentially in scope for de-energization during the period of concern, which was revised to December 7 at 6:00 am through December 8 at 6:00 pm.

On December 7th at approximately 4:30 pm, the PSPS IMT began observing dangerous fire weather conditions in the areas of concern and at approximately 5:30 pm began de-energizing circuits as detailed in the table on page 7. Customers on these impacted circuits had received advance notification of de-energization according to the PSPS guidelines; however, not all customers received imminent notification of de-energization. Although SCE attempted to provide imminent notification of de-energization to all the impacted customers, due to the large number of circuits that required de-energization and the internal issues coordinating imminent notifications between grid operations, responsible for managing de-energizations, and customer service, responsible for providing notices, SCE was unable to provide imminent notifications of de-energization to all customers before de-energization occurred.⁴

⁴Notification details for all de-energized circuits can be found in Attachment B-Critical Infrastructure and Customer Notifications. SCE details notification challenges in the lessons learned section of this report.

SCE also de-energized 22 circuits not originally forecast to be in scope for this event due to rapidly escalating wind speeds as detected on SCE's weather stations in the relevant areas and detailed in the table on page 7. Customers on these circuits did not receive any prior notification of potential de-energization. The IMT continued to actively monitor weather developments, patrol de-energized circuits for restoration where possible based on subsiding weather conditions, send imminent notice of re-energization, and restore circuits as conditions in the field improved.

December 8th –SCE held its daily State Executive call at 2:00 pm, an OEM County Coordination call at 2:30 pm and a Critical Infrastructure call at 3:30 pm to communicate the current and incoming weather forecast, customers in scope and answer any questions regarding the event. SCE emailed participants after the daily calls to provide the briefing materials shared. SCE sent notifications to public safety partners at 1:18 pm and critical infrastructure providers and customers at 3:35 pm and 9:35 pm with respect to circuits projected to be in scope through December 11. As the initial period of concern was set to expire at 3:00 pm on Tuesday, December 8, SCE meteorologists notified the PSPS IMT of the potential for an additional Santa Ana weather system to bring dangerous fire weather conditions for portions of Inyo, Kern, Mono, Riverside, and San Bernardino counties on December 10 at 9:00 am through December 11 at 9:00 am with approximately 178,992 customers potentially in scope for de-energization between the current and additional forecasted period of concern on December 10th.

At approximately 12:44 am on December 8th, in view of the dangerous fire weather conditions first observed by SCE on December 7th at 11:20 pm, SCE began de-energizing circuits as detailed in the table on page 7. Customers on these impacted circuits had received advance notification of de-energization according to the PSPS guidelines; however, not all received imminent notification of de-energization. Although SCE attempted to provide imminent notification of de-energization to all the impacted customers, due to the large number of circuits that required de-energization and the internal issues coordinating imminent notifications between grid operations, responsible for managing de-energizations, and customer service, responsible for providing notices, SCE was unable to provide imminent notifications of de-energization to all customers before de-energization occurred.⁵

SCE also de-energized 2 circuits not originally forecast to be in scope for this event due to rapidly escalating wind speeds as detected on SCE's weather stations in the area and detailed in the table on page 7. Customers on these circuits did not receive any prior notification of potential de-energization. The IMT continued to actively monitor weather developments, patrol de-energized circuits for restoration where possible based on subsiding weather conditions, send imminent notice of re-energization, and restore circuits as conditions in the field improved.

December 9th -- SCE held its daily State Executive call at 2:00 pm, an OEM County Coordination call at 2:30 pm and a Critical Infrastructure call at 3:30 pm to communicate the weather forecast, customers in scope and answer any questions regarding the event. SCE emailed participants after the daily calls to provide the briefing materials shared. SCE sent notifications to public safety partners at 3:28 pm and 7:50 pm and critical infrastructure providers and customers at 12:59 pm and 4:07 pm with respect to circuits projected to be in scope for the event. At that point, updated weather forecasts indicated circuits in Inyo, Mono, Riverside, and San Bernardino counties with approximately 1,906 customers were potentially in scope for de-energization during the period of concern, which was revised to

⁵Notification details for all de-energized circuits can be found in Attachment B-Critical Infrastructure and Customer Notifications. SCE details notification challenges in the lessons learned section of this report.

December 10 at 3:00 pm to December 11 at 12:00 pm. The IMT continued to actively monitor weather developments, patrol de-energized circuits for restoration where possible based on subsiding weather conditions, send imminent notice of re-energization, and restore circuits as conditions in the field improved.

December 10th – SCE held its daily State Executive call at 2:00 pm, an OEM County Coordination call at 2:30 pm and a Critical Infrastructure call at 3:30 pm to communicate the weather forecast, customers in scope and answer any questions regarding the event. SCE emailed participants after the daily calls to provide the briefing materials shared. SCE sent notifications to public safety partners at 11:57 am and 8:23 pm and critical infrastructure providers and customers at 12:53 pm with respect to circuits projected to be in scope for the event. At that point, updated weather forecasts indicated circuits in Inyo, Mono, Kern, Riverside, San Bernardino and Tuolumne counties with approximately 3,360 customers potentially in scope for de-energization during the period of concern, which was revised to December 10 at 3:00 pm to December 11 at 12:00 pm.

At approximately 5:30 pm on December 10th, the PSPS IMT began observing dangerous fire weather conditions in an area of concern and at approximately 6:10 pm de-energized the Tufa circuit as detailed in the table on page 7. Customers on this circuit received advance notification of de-energization according to the PSPS guidelines. The IMT continued to actively monitor weather developments, patrol de-energized circuits for restoration where possible based on subsiding weather conditions, send imminent notice of re-energization, and restore circuits as conditions in the field improved.

December 11th – SCE held its daily State Executive call at 2:00 pm, an OEM County Coordination call at 2:30 pm and a Critical Infrastructure call at 3:30 pm to communicate the weather forecast, customers in scope and answer any questions regarding the event. SCE emailed participants after the daily calls to provide the briefing materials shared. SCE sent notifications to public safety partners at 1:00 pm and 7:54 pm and critical infrastructure providers and customers at 12:12 pm and 7:47 pm with respect to circuits projected to be in scope through December 13. The IMT continued to actively monitor weather developments, patrol the remaining de-energized circuits for restoration where possible based on subsiding weather conditions, send imminent notice of re-energization, and restore circuits as conditions in the field improved. All circuits de-energized were restored by December 11 at 11:45 am.

As the current period of concern was set to expire on Friday, December 11, at 12:00 pm, SCE meteorologists notified the PSPS IMT of the potential for an additional Santa Ana weather system to bring dangerous fire weather conditions for portions of Kern, San Bernardino, Los Angeles, Orange, Riverside, and Ventura counties, with approximately 25,731 customers potentially in scope for de-energization during a new period of concern from December 12 at 9:00 pm through December 13 at 9:00 am.

December 12th -- SCE held its daily State Executive call at 2:00 pm, an OEM County Coordination call at 2:30 pm and a Critical Infrastructure call at 3:30 pm to communicate the current weather forecast, customers in scope and answer any questions regarding the event. SCE emailed participants after the daily calls to provide the briefing materials shared. SCE sent notifications to public safety partners at 12:57 pm and 11:58 pm and critical infrastructure providers and customers at 12:53 pm and 9:41 pm with respect to circuits projected to be in scope for the event. At that point, updated weather

forecasts indicated circuits in San Bernardino, Los Angeles, Orange, Riverside and Ventura counties with approximately 21,094 customers potentially in scope for de-energization during the current period of concern, which was revised to December 12 at 9:00 pm to December 13 at 12:00 pm.

December 13th -- SCE held its daily State Executive call at 2:00 pm, an OEM County Coordination call at 2:30 pm and a Critical Infrastructure call at 3:30 pm to communicate the potential incoming weather forecast, customers in scope and answer any questions regarding the event. SCE emailed participants after the daily calls to provide the briefing materials shared. SCE sent notifications to public safety partners at 6:46 pm and critical infrastructure providers and customers at 7:39 pm with respect to circuits projected to be in scope for the event. As the current period of concern was set to expire on Sunday, December 13, SCE meteorologists again notified the PSPS IMT of the potential for an additional Santa Ana weather system bringing dangerous fire weather conditions for portions of Los Angeles, Orange, Riverside, San Bernardino and Ventura counties, with approximately 43,209 customers potentially in scope for de-energization during a new period of concern from December 15 at 3:00 am through 6:00 pm.

December 14th -- SCE meteorologists contacted the Business Resiliency Duty Manager and indicated it was unlikely that the incoming forecasted Santa Ana wind event would bring elevated fire weather conditions that could necessitate the use of PSPS. Given this updated assessment, that morning SCE communicated its intention to demobilize the PSPS IMT to the CPUC, CalOES and the potentially impacted counties of Los Angeles, Orange, Riverside, San Bernardino and Ventura. SCE sent all-clear notifications to public safety partners, customers, and critical infrastructure providers at 12:08 pm and at approximately 1:30 pm on December 14th demobilized the PSPS IMT.

The following responses address how SCE complied with all applicable PSPS regulatory requirements, including ESRB-8 and the Phase 1 (D. 19-05-042) and Phase 2 (D. 20-05-051) decisions, during this event.

1. The time, place and duration of the power shutoff event

During this event, de-energization started at 5:30 pm on Monday, December 7, and continued through Friday, December 11, at 11:45 am. The pro-active de-energizations impacted portions of Inyo, Kern, Mono, Los Angeles, Orange, Riverside, San Bernardino, and Ventura counties. The table below provides the timeline for de-energization and restoration for all impacted circuits.

De-Energization/Re-Energization Circuit Timeline

Circuit	Isolation Device ⁶	De-Energized Date/Time	Customers Affected	Re-Energized ⁷ (1st load) Date/Time	Re-Energized (All load) Date/Time
SHOVEL	RAR3431	12/7/2020 5:29	33		12/8/2020 19:23
METTLER	RCS1132	12/7/2020 5:45	8		12/8/2020 0:41
ZENDA	RCS0309	12/7/2020 6:06	258		12/8/2020 12:17

⁶ Remote Automatic Recloser (RAR), Remote Controlled Switch (RCS), Pole Switch (PS), Gas Switch (GS), Padmount Enclosure (PME), and Circuit Breaker (CB) denote different types of sectionalizing devices used by SCE

⁷ "1st load" identifies if the circuit was re-energized in sections based on pre-patrols and weather conditions impacting the ability to re-energize the entire line simultaneously. "All load" identifies when the entire circuit was re-energized.

Circuit	Isolation Device ⁶	De-Energized Date/Time	Customers Affected	Re-Energized ⁷ (1st load) Date/Time	Re-Energized (All load) Date/Time

2. The local communities' representatives contacted prior to de-energization, the date on which they were contacted, and whether the areas affected by the de-energization are classified as Zone 1, Tier 2, or Tier 3 as per the definition in General Order 95, Rule 21.2⁸

County	Public Safety Partner	Date	Tier
Kern	County and State public safety and first responder agencies and local governments	12/4 and 12/7	Tier 2 Tier 3
Los Angeles	County and State public safety and first responder agencies and local governments	12/4	Tier 2 Tier 3
Orange	County and State public safety and first responder agencies and local governments	12/4	Tier 2 Tier 3
Riverside	County and State public safety and first responder agencies and local governments	12/4	Tier 2 Tier 3
San Bernardino	County and State public safety and first responder agencies and local governments	12/4	Tier 2 Tier 3
Tulare	County and State public safety and first responder agencies and local governments	12/4	Tier 2 Tier 3

⁸ See Attachment A Public Safety Partner Notifications for specifics of notifications. All dates listed denote initial notification to impacted Counties of potential PSPS event

County	Public Safety Partner	Date	Tier
Ventura	County and State public safety and first responder agencies and local governments	12/4	Tier 2 Tier 3

3. If unable to provide customers with notice at least 2 hours prior to the de-energization event, provide an explanation in its report.

On December 7 and 8, SCE de-energized circuits not originally forecast to be in scope for this event due to rapidly escalating wind speeds and elevated Fire Potential Index ratings. These circuits did not receive any prior notification of potential de-energization.⁹

4. Summarize the number and nature of complaints received as the result of the de-energization event and include claims that are filed due to de-energization.

As of the submission of this report, SCE is not aware of any formal complaints that were submitted to the Commission. SCE Consumer Affairs did receive complaints through the CPUC's Consumer Affairs Branch related to this PSPS event as detailed in the following table. As of the filing of this report, SCE was aware of 6 claims related to this PSPS event: 4 claimed food loss, 1 claimed property damage and 1 claimed the loss of a job opportunity.

PSPS Event Date	Number of Complaints	Nature of Complaints
12/4	41	<ul style="list-style-type: none"> • General complaint about PSPS • Not notified of PSPS • Upset about multiple PSPS • Customer upset PSPS impacting school • No internet availability: spectrum advised customer they cannot provide service to the area if there is no power • Claim denied for PSPS • Disputes PSPS, elderly and temperatures are cold • Disputes their circuit should be on the PSPS list • Loss of internet and kids are in school • No winds, power still out • Disputes PSPS, says system has been enhanced recently these should not be happening • Shutting off power before winds hit and leaving it off after they have passed

⁹Notification details for all de-energized circuits can be found in Attachment B-Critical Infrastructure and Customer Notifications.

Local jurisdictions expressed concern or sent inquiries related to the use of PSPS during this event and SCE is including the following examples of those interactions here for context. The following is not an exhaustive list of all SCE's interactions with local agencies during this PSPS event.

- The Acton Town Council (ATC) requested SCE clarify the basis upon which it issued PSPS warnings in Acton for the ongoing PSPS event. ATC referenced the SCE Latteau Canyon weather station data that showed humidity levels in the area around 50 percent and windspeeds in the area around 10 mph and requested specific indicators SCE was relying on to establish that a PSPS event notification was warranted. Representatives from SCE's Local Public Affairs organization followed up with an explanation of SCE's process for determining areas with the potential for use of PSPS.
- A customer in the Kagel Canyon area of Los Angeles County contacted an SCE Government Relations Manager sighting high humidity and low wind speeds in that area and requested specific indicators SCE was relying on to establish that a PSPS event notification was warranted. This included requesting details of SCE's Fire Potential Index. Representatives from SCE's Local Public Affairs organization followed up with an explanation of SCE's process for determining areas with the potential for use of PSPS.
- Customer emailed Kern County Supervisor Scrivner over concerns from a customer in the de-energized areas did not have access to land lines during PSPS events and that this outage impacted the ability to contact 911.
- A resident in the City of Moorpark, received multiple text messages for PSPS events resulting in confusion over the status of current de-energization. The IMT Liaison Officer forwarded the inquiry to Customer Service which investigated the root cause of the multiple messages. The customer was enrolled in both zip code and address based PSPS notifications leading to over notification. CS removed the customer from zip code alerting and left a detailed voicemail explaining both the cause of over notification and the resolution.

5. The timeline for power restoration (re-energization), in addition to the steps taken to restore power as required in Resolution ESRB-8.

A PSPS event will continue while dangerous fire weather conditions exist, and the threat of a catastrophic wildfire event remains due to these conditions. If circuits are de-energized, those circuits and impacted lines will be inspected to ensure there is no damage before power can be safely restored. Any visual inspection of the power lines typically take place during daylight hours for safety and accuracy. Therefore, patrol and restoration operations may be limited or prolonged during overnight hours. SCE strives to restore all power within 24 hours of de-energization when possible. The timeline for power restoration is detailed in the table below.

6. For any circuits that require more than 24 hours to restore, the utility shall explain why it was unable to restore each circuit within this timeframe in its post event report.

SCE's restoration process begins after dangerous fire weather conditions in the field have subsided, the period of concern has expired and the Incident Commander has approved restoration operations. SCE was able to restore power to all de-energized circuits within 24 hours, except for the Thatcher circuit, which was restored in 24 hours and 14 minutes after the Incident Commander approved restoration operations as referenced in the table on page 13. The brief delay in re-energization of the Thatcher circuit was due to the large number of circuits requiring patrol and restoration in multiple counties.

7. Identify the address of each community assistance location during the de-energization event, describe the location (in a building, a trailer, etc.), and describe the assistance available at each location, and give the days and hours that it was open.

Each of the CCV locations were equipped with ice vouchers or ice, water, firewood, blankets, and customer resiliency kits (containing PSPS program information, mask, gloves, hand sanitizer, solar power battery charger or an LED light with built-in battery). Customers were also able to power medical devices, if necessary.

CCV Locations and Details

Type	County	City/Community	Day and Time	Address
CCV	Kern	Tehachapi	12/7-12/8, 8am-10pm	27800 Stallion Springs Dr., Tehachapi, CA 93561
CCV	Los Angeles	Agua Dulce	12/7-12/8, 8am-10pm	33201 Agua Dulce Canyon Rd., Agua Dulce, CA 91390
CCV	Los Angeles	Acton	12/7-12/8, 8am-10pm	3748 Nickels St., Acton, CA 93510
CCV	Orange	Orange	12/7-12/8, 8am-10pm	3920 E. Spring St., Orange, CA 92869
CCV	Riverside	Idyllwild	12/7-12/8, 8am-10pm	25925 Cedar St. Idyllwild, CA 92549
CCV	San Bernardino	San Bernardino	12/7-12/8, 8am-8pm	5500 University Parkway, San Bernardino, CA 92407
CCV	Santa Barbara	Santa Barbara	12/8, 8am-5pm	1232 De La Vina St, Santa Barbara, CA 93101
CCV	Ventura	Simi Valley	12/7-12/8, 8am-10pm ¹⁰	3900 Avenida Simi, Simi Valley, CA 93063
CCV	Inyo	Bishop	12/11, 8am-10pm	1361 Rocking W Dr. Bishop, CA 93514
CCV	Los Angeles	Acton	12/13, 8am-3pm	3748 Nickels St., Acton, CA 93510
CCV	Los Angeles	Agua Dulce	12/13, 8am-3pm	33201 Agua Dulce Canyon Rd., Agua Dulce, CA 91390
CCV	Los Angeles	Chatsworth	12/13, 8am-3pm	23449 Lake Manor Dr., Chatsworth, CA 91311
CCV	Riverside	Cabazon	12/13, 8am-3pm	50390 Carmen Ave., Cabazon 92230
CCV	San Bernardino	Fontana	12/13, 8am-3pm	15556 Summit Ave., Fontana, CA 92336

8. Any wind-related damage(s) to SCE's overhead equipment in the areas where power is shutoff.

Circuit	County	Structure	Damage
BALCOM	Ventura	960643EE	Downed conductor
MATILIJA	Ventura	108929E	Downed conductor
PATRICIA	Ventura	4385909E	Damaged conductor
PINE COVE	Riverside	217700S, 2312957E	Damaged crossarm, blown lightning arrestor
SAND CANYON	Los Angeles	1534708E	Damaged conductor
SUTT	San Bernardino	1142S, 1499837E	Damaged conductor and crossarm
THATCHER	Ventura	474424E	Damaged pole
TIMBER CANYON	Ventura	881218E	Downed conductor

¹⁰ SCE demobilized the Simi Valley CCV location on December 8th due to a threat against SCE employees.

9. All factors considered by SCE in its decision to shut off power, including wind speed, temperature, humidity, and vegetation moisture in the vicinity of the de-energized circuits

SCE's decision to shut off power is dynamic and was made by considering the following factors during this PSPS event:

- National Weather Service-issued watches and warnings for high fire risk areas in our territory.
- Ongoing assessments from our in-house meteorologists using high-resolution weather models, data from SCE weather stations and publicly available weather stations.
- The SCE Fire Potential Index (FPI), a tool that utilizes weather data, fuel conditions, and vegetation moisture content to rate the daily fire potential across our region. SCE uses the following metrics to rate ignition potential -- Low - 11.99, Elevated - 12-14.99 and Extreme - 15 and above
- Wind speeds and trends,¹¹ particularly when considered in combination with other local conditions, such as dry vegetation. Wind speed thresholds may also be adjusted based on other factors or circuit condition and design. Wind trends refer to escalating wind speeds that are projected to meet or exceed established wind thresholds, including National Weather Service Wind Advisory levels (defined as 31 mph sustained wind speed and 46 mph gust wind speed) or exceed the top 1% of historical wind speeds in the area.
- Information received from field personnel conducting live observations.

SCE considered the following specific factors to inform de-energization decisions:

Circuit Name	Isolation Device	Weather Station	Wind Sustained	Gust Sustained	Threshold Sustained	FPI Value	Reasons for De-Energization

10. Evaluation of alternatives to de-energization that were considered, and mitigation measures used to decrease the risk of utility-caused wildfire in the de-energized area and an explanation of how the utility determined that the benefit of de-energization outweighed the potential public safety risks:

SCE sets thresholds based on SCE's risk-informed assessment of the potential for a catastrophic wildfire should an ignition occur under the conditions presented. Under such conditions, the harm to life and property resulting from a catastrophic wildfire vastly outweighs the impacts of the de-energization necessary to eliminate the potential of ignition. Additionally, SCE only uses de-energization when no other alternatives will mitigate this fire risk and, to the extent possible, minimizes the impact by limiting the de-energization to the smallest number of customers possible through segmentation of impacted circuits.

In all PSPS events, SCE uses sectionalizing through RAR devices or switches when available within a reasonable period to isolate and de-energize only the necessary portions of circuits. While avoiding de-energization entirely is not always possible, SCE takes these steps to reduce the impacts of de-energization on the community, considering the impacts of the de-energization on its stakeholders within the overall risk posed by the prevailing weather conditions, its de-energizations thresholds, and the unacceptable public safety risk of catastrophic wildfire ignition.

11. A copy of all notifications, the timing of notifications, the methods of notifications and who made the notifications (the utility or local public safety partners).

A copy of all notifications and the timing of notifications can be found in Attachment A - Public Safety Partner Notifications, Attachment B - Critical Infrastructure and Customer Notifications, and Attachment C - PSPS Activation Customer Notification Messaging. All PSPS event notifications to key stakeholders, including Public Safety Partners and customers, are delivered via voice, email, and TTY (telecommunication device for the hearing impaired) formats as per the preference of the recipient. Notifications are offered in multiple languages. All notifications were made by SCE.

12. Number of affected customers broken down by all classifications including residential, medical baseline, commercial/industrial, etc.

A detailed description of the number of affected customers broken down by all classifications including residential, medical baseline, commercial/industrial, etc. is provided in Attachment B- Customer and Critical Infrastructure Notifications.

13. An explanation of the circumstances that resulted in failure to communicate a potential pro-active de-energization event, if any.

On December 7 and 8, SCE de-energized circuits not originally forecast to be in scope for this event due to rapidly escalating wind speeds and elevated Fire Potential Index ratings. These circuits did not receive any prior notification of potential de-energization.¹² Additionally, as explained above, SCE was not able to give some of the de-energized customers notices of imminent de-energization, although they received earlier notices of potential de-energization.

14. Each electric investor-owned utility shall enumerate and explain the cause of any false communications in its post event reports by citing the sources of changing data.

SCE notices are designed to give customers notice that a de-energization could take place and a time frame within which the event is most likely to occur so that customers can act and prepare. Given the unpredictability of weather on the ground, however, SCE's advance notices do not affirmatively confirm that a circuit *will be* de-energized. In fact, for clarity, SCE does not provide any affirmative confirmation of de-energization in its notifications until an actual de-energization has taken place.

SCE believes this event could be viewed as an example of a false-negative communication since we were unable to provide all of the required advance notice of de-energization to Public Safety Partners, critical infrastructure providers, or customers on 20 circuits during this event given the rapid onset of hazardous weather conditions. Additionally, as discussed below, any advance notifications to customers who were not de-energized, although not viewed by SCE as false positives, are being reported here for transparency purposes. SCE provided notice to 197,729 customers of potential de-energization but not all of these customers were de-energized.

¹²Notification details for all de-energized circuits can be found in Attachment B-Critical Infrastructure and Customer Notifications.

15. A description and evaluation of engagement with local and state public safety partners in providing advanced education and outreach during the de-energization event.

Advanced education and outreach of this Public Safety Power Shutoff event was communicated to all impacted counties projected to be in scope, emergency management officials, CalOES, and the Commission before any forecasted weather was anticipated to impact the SCE service territory. Updates were provided throughout the event using the CalOES PSPS Notification Form, daily situational awareness and coordination calls and individual contact with Public Safety Partners in the affected counties.

16. For those customers where positive or affirmative notification was attempted, an accounting of the customers (which tariff and/or access and functional needs population designation), the number of notification attempts made, the timing of attempts, who made the notification attempt (utility or public safety partner) and the number of customers for whom positive notification was achieved.

SCE only tracks critical care customers for positive or affirmative receipt of notification attempts. Notifications are made daily as these customers remain on potentially impacted circuits. There were 793 critical care customers in scope for potential de-energization during this PSPS event and SCE was able to make positive contact with all of them. SCE regularly requests updated contact information from all critical care customers.

17. A description of how sectionalizing, i.e., separating loads within a circuit, was considered and implemented and the extent to which it impacted the size and scope of the de-energization event.

There were 197,729 total customers in scope for potential de-energization during the entire period of concern for this event across all known circuits. There were an additional 21,471 customers not in scope for the period of concern on 24 circuits that SCE had to ultimately de-energize due to rapidly escalating wind speeds. SCE reduced the number of customers de-energized to 73,137 customers using weather stations and switching playbooks that identified sectionalizing devices to limit the scope of the event. These sectionalizing devices¹³ separate and isolate the de-energization areas, limiting the de-energization impacts as detailed in the table on page 7 of this report. During the process of sectionalizing, 3,808 customers temporarily lost power (for up to approximately 60 minutes) but SCE does not consider these customers as pro-actively de-energized in the context of PSPS due to the fact that this was a loss of power during switching operations and the customers at issue were only minimally impacted by the PSPS event.

18. Lessons learned from the de-energization events.

SCE continues to evaluate lessons learned from all 2020 PSPS events and is considering potential improvements within that context. Given the size and scope of recent large PSPS events, SCE is

¹³ Remote Automatic Recloser (RAR), Remote Controlled Switch (RCS), Pole Switch (PS), Gas Switch (GS), Padmount Enclosure (PME), and Circuit Breaker (CB) denote different types of sectionalizing devices used by SCE

aware of an ongoing need to improve processes and procedures associated with imminent notifications when rapidly escalating wind conditions necessitate large numbers of circuits being de-energized. SCE is committed to impacting the smallest number of customers possible when executing PSPS operations and only provides imminent notifications when we are certain de-energization will occur. In widespread events, it is difficult to execute PSPS with geographic precision across a wide band of circuits, which has resulted in imminent notifications not being provided to some customers prior to de-energization.

19. Any recommended updates to the guidelines adopted in Resolution ESRB-8 and this decision.

SCE notes that its PSPS notices before potential de-energization only provide a warning to customers of a possible de-energization event. SCE notices are designed to give customers notice that a de-energization could take place and a time frame within which the event is most likely to occur so that customers can act and prepare. Given the unpredictability of weather on the ground, however, SCE's advance notices do not affirmatively confirm that a circuit *will be* de-energized. In fact, for clarity, SCE does not provide any affirmative notifications until an actual de-energization has taken place.

SCE believes that its notices are correct and factual. The definition of false positive is subject to interpretation about which notifications should be included. Impending de-energizations could reasonably be interpreted as notifications of imminent de-energization 1-4 hours before outages. SCE believes, however, that the Commission may be interested in all the advance notices of a possible de-energization to such customers. Consequently, in an effort to assure transparency and full compliance, SCE will treat them here as potential "false positives," see above, within the meaning of the PSPS guidance. SCE would appreciate any additional Commission clarification or guidance on this issue to assure it is fully compliant.

SCE notes that "false positives" typically refer to decisions made, or actions taken, based on erroneous information. Differences between notifications and actual de-energizations, however, do not stem from incorrect data, but rather from actual ground conditions varying from forecast conditions. This variance is inherent because of the constantly changing nature of emergent weather. SCE hopes that the Commission will take this into consideration when clarifying the definition of false positives going forward.

Officer Verification

I am an officer of the applicant corporation herein and am authorized to make this verification on its behalf. I am informed and believe that the matters stated in the foregoing document are true.

I declare under penalty of perjury that the foregoing is true and correct. Executed this 29th day of December 2020 in Cerritos, California

SCE LNO Notification Template Text: 2020-12-04 PSPS Activation

Liaison Officer (LNO) notifications are sent by circuit and/or county and based on circuits listed on SCE's Monitored Circuit List (MCL). LNO notifications begin 72 hours before the period of concern, when possible. LNO notifications differ from SCE customer notifications in terms of timing, message content, frequency, and audience.

There are seven unique LNO notification templates:

- An **Initial** notification is sent at the start of the incident for each impacted county and includes the activation's first LNO spreadsheet.
- **Update** notifications are sent twice daily with an attached LNO spreadsheet after each weather report/POC generated by Operations.
- **Imminent De-Energization, De-Energization, Imminent Re-Energization, and Re-Energization** notifications are sent, as needed, during PSPS events. No attachments.
- An **Event Concluded** notification is sent at the end of the incident for each county that had a circuit on the MCL letting officials know SCE's IMT is over. Attachment optional.

LNO notifications are sent to the following stakeholder groups. Contacts are either mapped to specific circuits or are included based on their County-level affiliation.

- Local City/County/Tribal Officials
- Public Safety Partners including CalFire and CalOES
- CCA Administrators
- State and Federal Legislative District Offices
- 211 Operators
- Independent Living Centers
- Other stakeholders with longer range emergency planning responsibilities

Initial Notification

Description:

Sent one time per county, starting 72 hours in advance of a possible PSPS event, alerting contacts that our weather specialists forecast potential extreme weather ahead. Includes the LNO POC spreadsheet with information about circuits and locations that could be impacted. Sent to all impacted jurisdictions and other LNO contacts, grouped by County.

Notification Subject Line and Message

Important: SCE Initial Notice for PSPS Event in [COUNTY NAME] on [start POC DATE].

This message is from the Southern California Edison Liaison Officer for official use by local / tribal governments and public safety partners.

Due to projected weather conditions, SCE may need to shut off power (a Public Safety Power Shutoff or PSPS) to electrical circuits in High Fire Risk Areas (HFRA) serving portions of some cities and/or unincorporated areas in [County Name]. SCE is also notifying customers on the affected circuits about the potential shutoff, giving them time to prepare.

SCE has opened its Emergency Operations Center and activated an Incident Management Team to monitor the weather and other conditions in real time. SCE relies on forecast data provided by in-house meteorologists, fire scientists, and other technical staff. Note that weather forecasts on radio and television may provide different information.

Please refer to the attached file for status and periods of concern for specific circuits in your county.

The SCE Liaison Officer typically sends update notifications twice a day, providing a rolling 72-hour advance warning of potential Public Safety Power Shutoffs. Additional targeted notifications will also be sent, as needed, to provide time-sensitive de-energize or re-energize information. Erratic or sudden onset of hazardous conditions that jeopardize public safety may impact SCE's ability to provide advanced notice to customers. A shutoff could occur sooner than anticipated, additional circuits could be impacted, or conditions could change, resulting in shutoffs no longer being considered for one or more circuits. We will notify you as conditions change.

There also might be weather-related or other unplanned repair outages in the areas designated for potential Public Safety Power Shutoffs. Information on these unplanned outages can be found at sce.com/outage.

Recommended Language to Share with the Public: SCE may shut off power on one or more circuits in your area. For more information, visit sce.com/PSPS.

Web and Maps

- PDFs of High Fire Risk Area (HFRA) circuit maps and GIS layers may be found, by county, at sce.com/maps.
- Information about SCE's Public Safety Power Shutoff (PSPS) program is at sce.com/PSPS.
- Access SCE's non-PSPS outage information page at sce.com/outages.
- Access information on weather conditions at sce.com/fireweather.
- SCE's post-PSPS reports are available at sce.com/pmps.

How to Contact Us

- **First Responders and Emergency Managers: Please DO NOT share this information with the public.**
 - SCE Business Resiliency Team
 - Business Resiliency Duty Manager hotline is **(800) 674-4478**. This is a 24/7 phone line that can be used outside of PSPS events as well as during activations.
 - BusinessResiliencyDutyManager@sce.com. The Business Resiliency Duty Manager mailbox is only monitored during activations.

Updated Conditions Notification

Description:

Sent once or twice daily after the Initial Notification to provide updates as the period of concern approaches. Includes the LNO POC spreadsheet with information about circuits and locations that could be/are impacted. Sent to all impacted jurisdictions, grouped by County.

Notification Subject Line and Message:

Important: SCE Update Notice for PSPS Event in [County Name].

This message is from the Southern California Edison Liaison Officer for official use by local / tribal governments and public safety partners.

Please refer to the attached file for UPDATED status and periods of concern for specific circuits in your county.

Due to weather conditions, SCE may need to shut off power (a Public Safety Power Shutoff or PSPS) to electrical circuits in High Fire Risk Areas (HFRA) serving portions of some cities and/or unincorporated areas in [COUNTY NAME]. SCE is also notifying customers on the affected circuits about the potential for shutoff, giving them time to prepare.

SCE's Incident Management Team continues to monitor the weather in real time. SCE relies on forecast data provided by in-house meteorologists, fire scientists, and other technical staff. Note that weather forecasts on radio and television may provide different information.

The SCE Liaison Officer typically sends update notifications twice a day, providing a rolling 72-hour advance warning of potential Public Safety Power Shutoffs. Additional targeted notifications will also be sent, as needed, to provide time-sensitive de-energize or re-energize information. Erratic or sudden onset of hazardous conditions that jeopardize public safety may impact SCE's ability to provide advanced notice to customers. A shutoff could occur sooner than anticipated, additional circuits could be impacted, or conditions could change, resulting in shutoffs no longer being considered for one or more circuits. We will notify you as conditions change.

There also might be weather-related or other unplanned repair outages in the areas designated for potential Public Safety Power Shutoffs. Information on these unplanned outages can be found at sce.com/outage.

Recommended Language to Share with the Public: Weather conditions have changed and we are providing an updated status for all circuits with potential for power shutoff in your area. Check your email for details and visit sce.com/PSPS.

Updated Conditions (Upcoming Period of Concern with recent PSPS Activity) Notification

Description:

Sent once or twice daily after the Initial Notification to provide updates as the period of concern approaches. Includes the LNO POC spreadsheet with information about circuits and locations that could be/are impacted. Sent to all impacted jurisdictions, grouped by County. Includes language stating that even though recent PSPS has concluded, there are still upcoming periods of concern (in lieu of concluding event and sending initial days or hours later).

Notification Subject Line and Message:

Important: SCE Update Notice for PSPS Event in [County Name].

This message is from the Southern California Edison Liaison Officer for official use by local / tribal governments and public safety partners.

The recent Public Safety Power Shutoffs in your county have concluded. However, due to fire weather conditions currently projected for Thursday (12/10/20), circuits in your county are in the upcoming period of concern. Please refer to the attached file for status and periods of concern for specific circuits.

SCE's Incident Management Team continues to monitor the weather in real time. SCE relies on forecast data provided by in-house meteorologists, fire scientists, and other technical staff. Note that weather forecasts on radio and television may provide different information.

The SCE Liaison Officer typically sends update notifications twice a day, providing a rolling 72-hour advance warning of potential Public Safety Power Shutoffs. Additional targeted notifications will also be sent, as needed, to provide time-sensitive de-energize or re-energize information. Erratic or sudden onset of hazardous conditions that jeopardize public safety may impact SCE's ability to provide advanced notice to customers. A shutoff could occur sooner than anticipated, additional circuits could be impacted, or conditions could change, resulting in shutoffs no longer being considered for one or more circuits. We will notify you as conditions change.

There also might be weather-related or other unplanned repair outages in the areas designated for potential Public Safety Power Shutoffs. Information on these unplanned outages can be found at [sce.com/outage](https://www.sce.com/outage).

Recommended Language to Share with the Public: Weather conditions have changed and we are providing an updated status for all circuits with potential for power shutoff in your area. Check your email for details and visit [sce.com/PSPS](https://www.sce.com/PSPS).

Updated Conditions Notification with Explanation on PSPS Consideration

Description:

Sent once or twice daily after the Initial Notification to provide updates as the period of concern approaches. Includes the LNO POC spreadsheet with information about circuits and locations that could be/are impacted. Sent to all impacted jurisdictions, grouped by County. Includes additional language explaining what SCE takes into consideration before recommending PSPS activity and how this information can differ from National Weather Service Red Flag warning.

Notification Subject Line and Message:

Important: SCE Update Notice for PSPS Event in [County Name].

This message is from the Southern California Edison Liaison Officer for official use by local / tribal governments and public safety partners.

Please refer to the attached file for UPDATED status and periods of concern for specific circuits in your county.

Due to weather conditions, SCE may need to shut off power (a Public Safety Power Shutoff or PSPS) to electrical circuits in High Fire Risk Areas (HFRA) serving portions of some cities and/or unincorporated areas in **XXX COUNTY**. SCE is also notifying customers on the affected circuits about the potential for shutoff, giving them time to prepare.

SCE's Incident Management Team continues to monitor the weather in real time, including wind speed, presence of dry vegetation (fire fuels) and humidity levels to determine the risk of wildfire danger during weather events. SCE relies on forecast data provided by in-house meteorologists, fire scientists, and other technical staff. Note that weather forecasts on radio and television may provide different information. As such,

PSPS shutoffs may occur in situations and areas not in scope for the National Weather Service Red Flag warning.

The SCE Liaison Officer typically sends update notifications twice a day, providing a rolling 72-hour advance warning of potential Public Safety Power Shutoffs. Additional targeted notifications will also be sent, as needed, to provide time-sensitive de-energize or re-energize information. Erratic or sudden onset of hazardous conditions that jeopardize public safety may impact SCE's ability to provide advanced notice to customers. A shutoff could occur sooner than anticipated, additional circuits could be impacted, or conditions could change, resulting in shutoffs no longer being considered for one or more circuits. We will notify you as conditions change.

There also might be weather-related or other unplanned repair outages in the areas designated for potential Public Safety Power Shutoffs. Information on these unplanned outages can be found at [sce.com/outage](https://www.sce.com/outage).

Recommended Language to Share with the Public: Weather conditions have changed and we are providing an updated status for all circuits with potential for power shutoff in your area. Check your email for details and visit [sce.com/PSPS](https://www.sce.com/PSPS).

Imminent De-Energize Notification

Description:

Sent 1-4 hours in advance of expected power shut off, when possible, for specific circuit(s). No spreadsheet attachment, all content is on the body of the notification. Sent to all impacted jurisdictions, grouped by County.

Notification Subject Line and Message:

Important: SCE Imminent De-Energize Notice for PSPS Event in [County Name].

This message is from the Southern California Edison Liaison Officer for official use by local / tribal governments and public safety partners.

Due to current weather conditions, SCE may need to shut off power (a Public Safety Power Shutoff or PSPS) in the next 1 to 4 hours to reduce the risk of wildfire ignition though the PSPS may occur earlier or later depending on actual weather conditions. Areas that may be impacted include:

- **Circuit: [CIRCUIT name]**
- **County:**
- **Segment:**
- **Incorporated City of:**
- **Unincorporated County Area: [cut and paste from LNO spreadsheet]**

Circuit segments may be viewed at sce.com/psps and maps downloaded at sce.com/maps.

This Imminent De-Energization warning expires after four hours. If one or more circuits listed here are de-energized by SCE due to PSPS, a De-Energized notification confirming date and time of the PSPS event will be sent. However, **if this imminent notice expires without de-energization, the listed circuit(s) remain on SCE's monitor list and subject to PSPS.**

SCE's Incident Management Team (IMT) is in place to monitor conditions, coordinate with government agencies, and oversee re-energization once conditions are safe. SCE will provide an update to your agency as conditions change. Erratic or sudden onset of hazardous conditions that jeopardize public safety may impact SCE's ability to provide advanced notice to customers. SCE relies on forecast data provided by in-house meteorologists, fire scientists, and other

technical staff. Note that weather forecasts on radio and television may provide different information.

The SCE Liaison Officer typically sends update notifications twice a day, providing a rolling 72-hour advance warning of potential PSPS events for this county. Additional targeted notifications provide alerts with all time-sensitive de-energize or re-energize information.

Recommended Language to Share with the Public: Due to current weather conditions, SCE may shut off the power on specific circuits within the next 1-4 hours. Check your email for details and visit www.sce.com/PSPS.

De-Energize Notification

Description:

Sent after a PSPS power shut off has occurred for specific circuit(s). No spreadsheet attachment, all content is on the body of the notification. Includes official date/time of de-energization for circuit(s). Sent to all impacted jurisdictions, grouped by County.

Notification Subject Line and Message:

Important: SCE De-Energize Notice for PSPS Event in [COUNTY NAME] at [TIME].

This message is from the Southern California Edison Liaison Officer for official use by local / tribal governments and public safety partners.

Due to weather conditions, SCE conducted a Public Safety Power Shutoff (PSPS) to circuits in your county. Impacted circuits and locations are:

- **Circuit: [CIRCUIT name]**
- **County:**
- **Segment:**
- **Incorporated City of:**
- **Unincorporated County Area: [cut and paste from LNO spreadsheet]**
- **De-Energized Date:**
- **De-Energized Time:**

Circuit segments may be viewed at [sce.com/psps](https://www.sce.com/psps) and maps downloaded at [sce.com/maps](https://www.sce.com/maps).

SCE is also notifying customers on the affected circuits to inform them about the shutoff. SCE understands the inconvenience of shutting off electric service. Safety is SCE's first priority. This Public Safety Power Shutoff (PSPS) action was taken with the safety of our customers and the public in mind, and to maintain the integrity of the electric system for all of our customers.

SCE has an Incident Management Team (IMT) in place to monitor conditions, coordinate with government agencies, and oversee re-energization once conditions are safe.

Power will be restored as weather conditions improve, crews conduct inspections, any necessary repairs have been made, and we determine it is safe to re-energize lines. In most cases, power will be restored within 24 hours from the end of the period of concern for the electrical circuit.

For customers in these areas who are experiencing a weather-related or other unplanned repair outage not related to PSPS, know that SCE crews are working as safely and quickly as possible to restore service. SCE relies on forecast data provided by in-house meteorologists, fire scientists, and other technical staff. Note that weather forecasts on radio and television may provide different information.

Recommended Language to Share with the Public: Due to current weather conditions, SCE has shut off power in your area. Check your email for details and visit www.sce.com/PSPS.

Imminent Re-Energize Notification

Description:

Sent once inspections are underway and with 1-hour advance notice of expected power restoration, when possible, for specific circuit(s). No spreadsheet attachment, all content is on the body of the notification. Sent to all impacted jurisdictions, grouped by County.

Notification Subject Line and Message:

Important: SCE Imminent Re-Energize Notice for PSPS Event in [COUNTY NAME].

This message is from the Southern California Edison Liaison Officer for official use by local / tribal governments and public safety partners.

SCE crews have completed inspections, made any necessary repairs, and determined it is safe to begin **RE-ENERGIZING** the following circuit(s) or segments of circuit(s):

- **Circuit:** [CIRCUIT name]
- **Segment(s):**
- **County:**
- **Incorporated City of:**
- **Unincorporated County Area:** [cut and paste from LNO spreadsheet or circuit tool]

Circuit segments may be viewed at [sce.com/psps](https://www.sce.com/psps) and maps downloaded at [sce.com/maps](https://www.sce.com/maps).

SCE will also begin notifying customers that power will be turned back on. In most cases, power will be restored within 24 hours from the end of the period of concern for the electrical circuit. SCE's Incident Management Team will continue to monitor conditions and coordinate with government agencies.

For customers in these areas who are experiencing a weather-related or other unplanned repair outage not related to PSPS, know that SCE crews are working safely and as quickly as possible to restore service. SCE relies on forecast data provided by in-house meteorologists, fire scientists, and other technical staff. Note that weather forecasts on radio and television may provide different information.

Recommended Language to Share with the Public: SCE will begin turning power back on in your area. SCE has inspected its electrical lines and equipment, made any necessary repairs, and determined it is safe to turn on the power. Check your email for details and visit [sce.com/PSPS](https://www.sce.com/PSPS).

Re-Energize Notification

Description:

Sent after a PSPS re-energization has occurred for specific circuit(s). No spreadsheet attachment, all content is on the body of the notification. Includes official date/time of power restoration for circuit(s). Sent to all impacted jurisdictions, grouped by County.

Notification Subject Line and Message:

Important: SCE Re-Energize Notice for PSPS Event in [COUNTY NAME].

This message is from the Southern California Edison Liaison Officer for official use by local / tribal governments and public safety partners.

SCE crews have inspected the lines, made any necessary repairs, and determined it was safe to **RE-ENERGIZE** the following circuit(s):

- **Circuit:**
- **County:**
- **Incorporated City of:**
- **Unincorporated County Area: (cut and paste from LNO Spreadsheet]**
- **Re-Energized Date:**
- **Re-Energized Time:**

SCE is also notifying customers that power has been turned back on. SCE's Incident Management Team will continue to monitor conditions and coordinate with government agencies.

For customers in these areas who are experiencing a weather-related or other unplanned repair outage not related to a PSPS, know that SCE crews are working as safely and quickly as possible to restore service. SCE relies on forecast data provided by in-house meteorologists, fire scientists, and other technical staff. Note that weather forecasts on radio and television may provide different information.

The SCE Liaison Officer typically sends update notifications twice a day, providing a rolling 72-hour advance warning of potential PSPS events for this county. Additional targeted notifications provide alerts with all time-sensitive de-energize or re-energize information.

Recommended Language to Share with the Public: SCE is turning the power back on in your area. We have inspected our electrical lines and equipment, made any necessary repairs, and determined it is safe to turn on the power. Check your email for details and visit [sce.com/PSPS](https://www.sce.com/PSPS).

Event Concluded Notification

Notification Subject Line and Message:

Sent, by county, once all circuits are re-energized* and the event is over for that county. Depending on circumstances, this may be sent with or without an LNO POC attachment. Eventually each county will receive an Event Concluded “all clear” so they know the weather event has passed and all power is up.

*Sometimes (rarely), a circuit may take longer to re-energize such as when we are working in a fire area and crews don't have access. In those cases that circuit may be transitioned to Operations and closed out from a PSPS standpoint. That information is included in the Event Concluded notification, indicating power is not fully restored for that circuit(s).

Notification Subject Line and Message:

Important: SCE Event Concluded Notice for PSPS Event in [COUNTY NAME].

This message is from the Southern California Edison Liaison Officer for official use by local / tribal governments and public safety partners.

Please note that there is no longer PSPS activity anticipated in your area for the next 72-hour period. SCE's Incident Management Team continues to monitor current and incoming activity in other counties.

For customers in areas experiencing a weather-related or other unplanned repair outage not related to PSPS, know that SCE crews are working as safely and quickly as possible to restore service. SCE relies on forecast data provided by in-house meteorologists, fire scientists, and other technical staff. Note that weather forecasts on radio and television may provide different information.

Recommended Language to Share with the Public: The power shutoff in your area has concluded. Customers in this area, however, may experience other weather-related or unplanned repair outages not related to the Public Safety Power Shutoff (PSPS). Check your email for details and visit [sce.com/PSPS](https://www.sce.com/PSPS).

Web and Maps

- Information about SCE's Public Safety Power Shutoff (PSPS) program is at [sce.com/PSPS](https://www.sce.com/PSPS).
- Access SCE's non-PSPS outage information page at [sce.com/outages](https://www.sce.com/outages).
- Access information on weather conditions at [sce.com/fireweather](https://www.sce.com/fireweather).
- SCE's post-PSPS reports are available at [sce.com/psps](https://www.sce.com/psps).

How to Contact Us

- **First Responders and Emergency Managers: Please DO NOT share this information with the public.**
 - SCE Business Resiliency Team
 - Business Resiliency Duty Manager hotline is **(800) 674-4478**. This is a 24/7 phone line that can be used outside of PSPS events as well as during activations.
 - BusinessResiliencyDutyManager@sce.com. The Business Resiliency Duty Manager mailbox is only monitored during activations.
- **Public Officials: Please DO NOT share this information with the public.**
 - SCE Liaison Officer (LNO)

- LNO hotline is 800-737-9811. This 24/7 phone line is for use by local government and tribal officials only and it's monitored only during emergency activations.
 - SCELiaisonOfficer@sce.com. The LNO mailbox is for use by local government officials and only monitored during emergencies or PSPS activations.
- **Members of the Public: Please DO share this information with your residents on your website or social media.**
 - 800-611-1911 is for outage-specific Customer Service issues.
 - 800-684-8123 is for all other billing and service inquiries.
 - [sce.com/PSPS](https://www.sce.com/PSPS) is the site where customers may learn more about PSPS events in their area.
 - Update customer contact information at [sce.com/pspsalerts](https://www.sce.com/pspsalerts).

Notes

PG&E Notification Categories

- Severe Weather Forecasted (up to a week before event)
- PSPS Outage Watch Notifications (two days before, outages likely)
- PSPS Outage Warning Notification (several hours before, outages required)
- Power Shut Off (during severe weather)
- Updates and Inspections (weather has improved, inspections and restorations have begun)
- PSPS Power Restored (within 12 daylight hours after severe weather has passed, power restored to all affected communities)

Preparing to Re-Energize (Imminent Restoration)

Voice/ Voice Mail/TTY:

This is an important safety message from Southern California Edison. SCE will soon begin the process of inspecting electrical lines in the ^city variable^ area. Provided we find no safety concerns, we will begin the power restoration process. To ensure you are ready for service, turn off or unplug any appliances or equipment that may automatically start when your power is restored. For more information on SCE's restoration process, please visit sce.com/psps. Downed power line? Stay away, call 911, and SCE at 1-800-611-1911.

Text/SMS:

SCE Safety Alert: SCE will soon begin the process of inspecting electrical lines in the ^city variable^ area. Provided we find no safety concerns, we will begin the power restoration process. To ensure you are ready for service, turn off or unplug any appliances or equipment that may automatically start when your power is restored. For more information on SCE's restoration process, please visit sce.com/psps. Downed power line? Stay away, call 911, and SCE at 1-800-611-1911.
